

Nicolas Guillen

Experienced full-stack developer who likes wearing multiple hats. Have you heard automation is like having an extra employee? I like automating and making things efficient.

Relevant Experience

Even though my experience is important, I consider my projects to be equally meaningful to my career. Please check my portfolio.

Web developer · **Telefónica** Oct 2019 - Apr 2021

- I created with one co-worker an in-house automation platform for the whole organization. We talked with multiple departments to see what new tools could benefit them, and we went through feedback cycles to deliver.
- I created a private marketplace at the beginning of the pandemic because people in the organization started having side hustles. So we implemented a web application where people could offer their products or services.
- I implemented Gitea which is like an open source version of GitHub. It allowed the team to ship code faster inside the VPN because we used to use FTP before that with no version control.

Web developer · **Accenture** Mar 2021 - Mar 2022

- I created a set of tools that decreased the amount of repetitive work in the team. I used Vue js for the UI and it generated scripts to help input information faster. This project was my initiative and I did it outside of regular work hours.
- I used AEM and helped to maintain pages and their content.

Frontend developer · **Kyndryl** Mar 2022 - Dec 2022

- I maintained and created UI components to behave and look as designed. I had to implement unit tests to make sure things were working properly.
- We made new features available through feature flags.
- I consumed existing APIs and connected them to the state manager.

Launched 3 SaaS · **Entrepreneurship** Jan 2023 - Present

- I applied to YC with my project Inkker. I made the right decisions with the tech stack and went through feedback cycles to deliver something good.
- I launched a small AI app with OpenAI and a subscription-based business model with Stripe.
- I launched a service business where I offered 9 automation tools to tattoo businesses.
- I mention these projects as technical achievements. I don't have the operations and marketing knowledge to run a business yet.

Skills

Programming Languages

Javascript, SQL, C#

Tools

Next js, React, Auth0, Vue js,
Node js, Express, Prisma...

Other

Strong automation skills
REST API creation/use
Payment processors
Git/GitHub
DevTools

Education

Don Bosco Technical Highschool · Costa Rica

I started coding in 2017, and every year I had to build a full-stack project with a team. I learned the fundamentals, C#, PHP, and Javascript. I graduated in 2019.

Languages

English, Spanish

Interests

Landscape photography,
startup content, side hustles,
cooking YouTube channels,
and I try to stay active.

Selected Projects

As of August 25, 2023, I am migrating all my projects to reduce my costs. So if the URLs are not loading please try again later.

More of my projects can be found on LinkedIn or in my portfolio.

Inkker · <https://inkker.com>

It's like PeerSpace for tattoo artists. I used Next js, Prisma, MySQL, Strapi, Vercel, and Digital Ocean.

Devtalk AI · <https://devtalkai.com>

Created to bridge the gap between non-technical individuals and developers. I used Open AI, Stripe, Next js, Auth0, Prisma, Postgres, and Vercel.

09 Tattoo automation tools · <https://09tattooautomations.vercel.app>

Created to automate some parts of tattoo businesses. I used the Brevo email provider, Next js, Prisma, MySQL, Auth0, and Vercel.

Certifications and Courses

All my courses and certifications are listed on my LinkedIn. The ones listed below are the ones I consider the most important.

- Professional Software Architecture Course (Mar 2021)
- Introduction to Vue 3 Course (Feb 2021)
- Vue js Professional Course (Oct 2020)
- React Course (Feb 2021)
- Introductory Course to Blockchain Development: Smart Contracts (Jan 2022)
- Ethereum Course for Developers (Jan 2022)
- Introduction to Solidity Course (Feb 2022)
